Full Stack Web Developer leveraging a psychology background and using its concepts to create an engaging user experience. Proven ability to lead and collaborate with others to achieve common goals. Known for great time management skills, a tireless work ethic, and thriving in challenging environments that foster growth. Earned a certificate in Full Stack Development from the University of North Carolina.

Projects

Flare

Github: <https://github.com/jamespericles/Flare>

Primary Technologies Utilized: React, Javascript, MySQL, Sequelize, Twilio, Cron  
Description: Powered by React, Flare allows users to automate text message alerts to loved ones incase the user is otherwise incapacitated

- Employed over a dozen other different API's and technologies to create an incredibly powerful application that increases user safety by automating text messages to different contacts.
- Created the idea for the project, worked alongside two other developers across three weeks to full realize the project
- Managed Github repository and Trello board to ensure the team completed the project
- Contributed in creating a framework for mapping, planned data and logic flow.
- Created an incredibly robust multi-relational database to allow for the app to function properly.

Employee Management System

Github: <https://github.com/jamespericles/Employee-Management-System>

Technologies Utilized: Javascript, Inquirer, Node.js, MySQL  
Description: CLI-based application that allows users to create and view a database consisting of relational tables of employees, roles, and departments

- Designed and created a robust CLI-based application that allows for streamlined organization of employees, roles, and departments
- Nested several queries to the database to streamline updating, deleting, or viewing of personnel, their respective roles, and departments

Career Summary

Full Stack Web Developer Intern

Digital Factory  
2020 - PRESENT

- Created and designed plans for the user-facing side of applications, including the control, look, feel and function of all components
- Structured the back end of all projects, managed program logic and server database interaction
