James Pericles

Full Stack Web Developer

Professional Summary

Full Stack Web Developer leveraging a psychology background and using its concepts to create an engaging user experience. Proven ability to lead and collaborate with others to achieve common goals. Known for great time management skills, a tireless work ethic, and thriving in challenging environments that foster growth. Earned a certificate in Full Stack Development from the University of North Carolina.

Projects

Employee Management System

- Utilized JavaScript, Inquirer, Node.js and MySQL to create a robust CLI-based application that allows for streamlined organization of employees, roles, and departments
- Nested several queries to the database to streamline updating, deleting, or viewing of personnel, their respective roles, and departments

Informed Diner

- Employed Google's FirebaseDB, Google Places API, and BestTime's API to calculate a safety rating for venues based on several factors including busyness, peak hours, surge traffic, and crowdedness
- Contributed in creating a framework for mapping, planned data and logic flow
